

REAL-TIME DATA, WHEREVER YOU ARE

- MS Excel add-in for data management
- It supports the most common communication protocols
- Web platform
- Drag & Drop technology
- Multiplatform
- Scalable solution

Application Areas

SUCCESS CASE: MESSER

Installation of a PlantValue with 1,000 tags in the North factory and another one in the South factory, with the aim of gathering all the process variables and showing them to the different departments. The system includes the Audit Trail functions with the purpose of complying with American regulation CFR 21 Part 11, regarding logging data changes. Reporting through the Excel add-in provides an easy method for performing bottle load controls, and controlling the most critical alarms in the system. In the event of failure in the plant, web access with read-only permissions allows us to perform an initial diagnosis.
